

07-Commands for Layer 3

Forward and ARP

Directory

1.Commands for Layer 3 Interface	1
description.....	1
interface vlan	1
no interface IFNAME	1
show ip route.....	2
2.Commands for IPv4/v6 configuration	3
clear ip traffic.....	3
clear ipv6 neighbor	3
ip address.....	4
ip default-gateway	4
ipv6 address.....	5
ipv6 nd dad attempts.....	5
ipv6 nd ns-interval	6
ipv6 neighbor.....	6
show ip interface	7
show ip traffic	7
show ipv6 interface	9
show ipv6 route	10
show ipv6 neighbors.....	10
show ipv6 traffic	11
ip route	13
3.Commands for ARP Configuration	13
arp.....	13
clear arp-cache	14
clear arp traffic	14
show arp	14
show arp traffic.....	16
4.Commands for ARP Scanning Prevention.....	16
anti-arpSCAN enable	16
anti-arpSCAN port-based threshold	16
anti-arpSCAN ip-based threshold.....	17
anti-arpSCAN trust	17
anti-arpSCAN trust ip.....	18
anti-arpSCAN recovery enable	18
anti-arpSCAN recovery time	19
anti-arpSCAN log enable	19
anti-arpSCAN trap enable.....	19
show anti-arpSCAN.....	20
5.Commands for Preventing ARP Spoofing.....	21
ip arp-security updateprotect.....	21
ip arp-security learnprotect.....	21
ip arp-security convert.....	22
clear ip arp dynamic	22
clear ipv6 nd dynamic.....	22
6.Command for ARP GUARD	23
arp-guard ip	23
7.Commands for Gratuitous ARP Configuration.....	23
ip gratuitous-arp	23

show ip gratuitous-arp.....	24
8.Commands for Dynamic ARP Inspection	24
ip arp inspection	25
ip arp inspection trust.....	25
ip arp inspection limit-rate	25

1.Commands for Layer 3 Interface

description

Command	description <text> no description
parameter	text is the description information of VLAN interface, the length should not exceed 256 characters
default	Do not configure
Mode	VLAN interface mode
Usage Guide	The description information of VLAN interface behind description and shown under the configured VLAN.
Example	Configure the description information of VLAN interface as test vlan. Switch(config)#interface vlan 2 Switch(config-if-vlan2)#description test vlan

interface vlan

Command	interface vlan <vlan-id> no interface vlan <vlan-id>
parameter	vlan-id is the VLAN ID of the established VLAN, ranging from 1 to 4094.
default	No Layer 3 interface is configured upon switch shipment.
Mode	Global Mode
Usage Guide	this command is used to create the 3-layer interface, no the command is used to delete the 3-layer interface.
Example	Create a VLAN interface (layer 3 interface). Switch(config)#interface vlan 1 Switch(Config-if-Vlan1)#[/table]

no interface IFNAME

Command	no interface IFNAME
----------------	----------------------------

parameter	IFNAME	Interface Name
default	-	
Mode	Global mode	
Usage Guide	<p>This command is used to delete the layer 3 interface. It can deal with the situation that the interface name is spelt in special way. IFNAME can match multiple ways, such as vlan1, Vlan1, v1, V1 and etc.</p>	
Example	<p>Delete interface vlan1. (config)# no interface vlan1</p>	

show ip route

Command	show ip route [database]	
parameter	database	is database information.
default	-	
Mode	Admin Mode	
Usage Guide	<p>Show kernel routing table, include: routing type, destination network, mask, next-hop address, interface, etc.</p>	
Example	<p>shows the routing table. Switch#show ip route Codes: K - kernel, C - connected, S - static, R - RIP, B - BGP O - OSPF, IA - OSPF inter area N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2 E1 - OSPF external type 1, E2 - OSPF external type 2 i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area * - candidate default</p> <p>C 127.0.0.0/8 is directly connected, Loopback tag:0 Total routes are : 1 item(s)</p>	

Display information	describe
C -connected	Direct route, namely the segment directly connected with the layer 3 switch
S -static	Static route, the route manually configured by users
R - RIP derived	RIP route, acquired by layer 3 switch through the RIP protocol.

O - OSPF derived	OSPF route, acquired by layer 3 switch through the OSPF protocol
A- OSPF ASE	Route introduced by OSPF
B- BGP derived	BGP route, acquired by the BGP protocol.

2.Commands for IPv4/v6 configuration

clear ip traffic

Command	<code>clear ip traffic</code>
parameter	-
default	-
Mode	Admin Mode.
Usage Guide	Clear the statistic information of receiving and sending packets for IP kernel protocol, including the statistic of receiving packets, sending packets and dropping packets and the error information of receiving and sending packets for IP protocol, ICMP protocol, TCP protocol and UDP protocol.
Example	<p>Clear statistic information of IP protocol.</p> <pre>Switch#clear ip traffic</pre>

clear ipv6 neighbor

Command	<code>clear ipv6 neighbors</code>
parameter	-
default	-
Mode	Admin Mode.
Usage Guide	This command can not clear static neighbor
Example	<p>Clear neighbor list.</p> <pre>Switch#clear ipv6 neighbors</pre>

ip address

Command	ip address <ip-address> <mask> [secondary] no ip address [<ip-address> <mask>] [secondary]
parameter	ip-address is IP address, dotted decimal notation; mask is subnet mask, dotted decimal notation; secondary indicates that the IP address is configured as secondary IP address.
default	The system default is no IP address configuration.
Mode	VLAN interface configuration mode
Usage Guide	This command configures IP address on VLAN interface manually. If optional parameter secondary is not configured, then it is configured as the primary IP address of VLAN interface; if optional parameter secondary is configured, then that means the IP address is the secondary IP address of VLAN. One VLAN interface can only have one primary IP address and more than one secondary IP addresses. Primary IP and Secondary IP all can be used on SNMP/Web/Telnet management. Furthermore, the switch also provides BOOTP/DHCP manner to get IP address.
Example	The IP address of switch VLAN1 interface is set to 192.168.1.10/24. Switch(Config-if-Vlan1)#ip address 192.168.1.10 255.255.255.0

ip default-gateway

Command	ip default-gateway <A.B.C.D> no ip default-gateway <A.B.C.D>
parameter	A.B.C.D is gateway address, for example 10.1.1.10.
default	There is no default gateway.
Mode	Global mode.
Usage Guide	Configure the default gateway of the router to specify the default next hop address to which the packets will be sent.
Example	Specifies the default gateway.Switch(config)# ip default-gateway 10.1.1.10

ipv6 address

Command	ipv6 address <ipv6-address prefix-length> [eui-64] no ipv6 address <ipv6-address prefix-length> [eui-64]
parameter	ipv6-address is the prefix of IPv6 address, parameter prefix-length is the prefix length of IPv6 address, which is between 3-128 eui-64 means IPv6 address is generated automatically based on eui64 interface identifier of the interface.
default	-
Mode	Interface Configuration Mode
Usage Guide	IPv6 address prefix cannot be multicast address or any other specific IPv6 address, and different layer 3 interfaces cannot configure the same address prefix. For global unicast address, the length of the prefix must be greater than or equal to 3. For site-local address and link-local address, the length of the prefix must be greater than or equal to 10.
Example	Configure an IPv6 address on VLAN1 Layer 3 interface: the prefix is 2001:3f:ed8::99 and the length of the prefix is 64. Switch(Config-if-Vlan1)#ipv6 address 2001:3f:ed8::99/64

ipv6 nd dad attempts

Command	ipv6 nd dad attempts <value> no ipv6 nd dad attempts
parameter	value is the Neighbor Solicitation Message number sent in succession by Duplicate Address Detection and the value of <value> must be in 0-10, NO command restores to default value 1.
default	The default request message number is 1
Mode	Interface Configuration Mode
Usage Guide	When configuring an IPv6 address, it is required to process IPv6 Duplicate Address Detection, this command is used to configure the ND message number of Duplicate Address Detection to be sent, value being 0 means no Duplicate Address Detection is executed.
Example	The Neighbor Solicitation Message number sent in succession by interface when setting Duplicate Address Detection is 3. Switch(Config-if-Vlan1)# ipv6 nd dad attempts 3

ipv6 nd ns-interval

Command	ipv6 nd ns-interval <seconds> no ipv6 nd ns-interval
parameter	seconds is the time interval of sending Neighbor Solicitation Message, <seconds> value must be between 1-3600 seconds, no command restores the default value 1 second.
default	The default Request Message time interval is 1 second.
Mode	Interface Configuration Mode
Usage Guide	The value to be set will include the situation in all routing announcement on the interface. Generally, very short time interval is not recommended.
Example	Set Vlan1 interface to send out Neighbor Solicitation Message time interval to be 8 seconds. Switch(Config-if-Vlan1)#ipv6 nd ns-interval 8

ipv6 neighbor

Command	ipv6 neighbor <ipv6-address> <hardware-address> interface <interface-type interface-name> no ipv6 neighbor <ipv6-address>
parameter	ipv6-address is static neighbor IPv6 address hardware-address is static neighbor hardware address interface-type is Ethernet type, interface-name is Layer 2 interface name
default	There is not static neighbor table entry
Mode	Interface Configuration Mode
Usage Guide	IPv6 address and multicast address for specific purpose and local address cannot be set as neighbor.
Example	Set static neighbor 2001:1:2::4 on port E1/0/1, and the hardware MAC address is 00-03-0f-89-44-bc. Switch(Config-if-Vlan1)#ipv6 neighbor 2001:1:2::4 00-03-0f-89-44-bc interface Ethernet 1/0/1

show ip interface

Command	show ip interface [<interface> vlan <vlan-id>] brief
parameter	<i>ifname</i> Interface name <i>vlan-id</i> VLAN ID
default	Show all brief information of the configured layer 3 interface when no parameter is specified.
Mode	All modes.
Usage Guide	This command is used to view brief information on the configured Layer 3 interface.
Example	view brief information on vlan1 interface configuration. Switch#show ip interface vlan 1 brief

show ip traffic

Command	show ip traffic
parameter	-
default	-
Mode	Admin Mode
Usage Guide	Display statistics for IP, ICMP, TCP, UDP packets received/sent.
Example	Displays statistics for IP packets. Switch#show ip traffic IP statistics: Rcvd: 3249810 total, 3180 local destination 0 header errors, 0 address errors 0 unknown protocol, 0 discards Frags: 0 reassembled, 0 timeouts 0 fragment rcvd, 0 fragment dropped 0 fragmented, 0 couldn't fragment, 0 fragment sent Sent: 0 generated, 3230439 forwarded 0 dropped, 0 no route ICMP statistics: Rcvd: 0 total 0 errors 0 time exceeded 0 redirects, 0 unreachable, 0 echo, 0 echo replies 0 mask requests, 0 mask replies, 0 quench 0 parameter, 0 timestamp, 0 timestamp replies Sent: 0 total 0 errors 0 time exceeded 0 redirects, 0 unreachable, 0 echo, 0 echo replies

0 mask requests, 0 mask replies, 0 quench
 0 parameter, 0 timestamp, 0 timestamp replies
 TCP statistics:
 TcpActiveOpens 0, TcpAttemptFails 0
 TcpCurrEstab 0, TcpEstabResets 0
 TcpInErrs 0, TcpInSegs 3180
 TcpMaxConn 0, TcpOutRsts 3
 TcpOutSegs 0, TcpPassiveOpens 8
 TcpRetransSegs 0, TcpRtoAlgorithm 0
 TcpRtoMax 0, TcpRtoMin 0
 UDP statics:
 UdpInDatagrams 0, UdpInErrors 0
 UdpNoPorts 0, UdpOutDatagrams 0

Display content	describe
IP statistics:	IP packet statistics
Rcvd: 3249810 total, 3180 local destination 0 header errors, 0 address errors 0 unknown protocol, 0 discards	Statistics of total packets received, number of packets reached local destination, number of packets have header errors, number of erroneous addresses, number of packets of unknown protocols; number of packets dropped.
Frags: 0 reassembled, 0 timeouts 0 fragment rcvd, 0 fragment dropped 0 fragmented, 0 couldn't fragment, 0 fragment sent	Fragmentation statistics: number of packets reassembled, timeouts, fragments received, fragments discarded, packets that cannot be fragmented, number of fragments sent, etc.
Sent: 0 generated, 0 forwarded 0 dropped, 0 no route	Statistics for total packets sent, including number of local packets, forwarded packets, dropped packets and packets without route.
ICMP statistics:	ICMP packet statistics.
Rcvd: 0 total 0 errors 0 time exceeded 0 redirects, 0 unreachable, 0 echo, 0 echo replies 0 mask requests, 0 mask replies, 0 quench 0 parameter, 0 timestamp, 0 timestamp replies	Statistics of total ICMP packets received and classified information
Sent: 0 total 0 errors 0 time exceeded 0 redirects, 0 unreachable, 0 echo, 0 echo replies 0 mask requests, 0 mask replies, 0 quench 0 parameter, 0 timestamp, 0 timestamp replies	Statistics of total ICMP packets sent and classified information
TCP statistics:	TCP packet statistics.

UDP statistics:	UDP packet statistics.
-----------------	------------------------

show ipv6 interface

Command	<code>show ipv6 interface {brief <interface-name>}</code>				
parameter	<table border="1"> <tr> <td>brief</td><td>is the brief summarization of IPv6 status and configuration</td></tr> <tr> <td>interface-name</td><td>is Layer 3 interface name</td></tr> </table>	brief	is the brief summarization of IPv6 status and configuration	interface-name	is Layer 3 interface name
brief	is the brief summarization of IPv6 status and configuration				
interface-name	is Layer 3 interface name				
default	-				
Mode	Admin and Configuration Mode				
Usage Guide	If only brief is specified, then information of all L3 is displayed, and you can also specify a specific Layer 3 interface.				
Example	<p>View information about the vlan1 interface.</p> <pre>Switch#show ipv6 interface Vlan1 Vlan1 is up, line protocol is up, dev index is 2004 Device flag 0x1203(UP BROADCAST ALLMULTI MULTICAST) IPv6 is enabled Link-local address(es): fe80::203:ffff:fe00:10 PERMANENT Global unicast address(es): 3001::1 subnet is 3001::1/64 PERMANENT Joined group address(es): ff02::1 ff02::16 ff02::2 ff02::5 ff02::6 ff02::9 ff02::d ff02::1:ff00:10 ff02::1:ff00:1 MTU is 1500 bytes ND DAD is enabled, number of DAD attempts is 1 ND managed_config_flag is unset ND other_config_flag is unset ND NS interval is 1 second(s) ND router advertisements is disabled ND RA min-interval is 200 second(s) ND RA max-interval is 600 second(s) ND RA hoplimit is 64 ND RA lifetime is 1800 second(s) ND RA MTU is 0 ND advertised reachable time is 0 millisecond(s)</pre>				

ND advertised retransmit time is 0 millisecond(s)

Display content	describe
Vlan1	Layer 3 interface name
[up/up]	Layer 3 interface status
dev index	Internal index No.
fe80::203:fff:fe00:10	Automatically configured IPv6 address of Layer 3 interface
3001::1	Configured IPv6 address of Layer 3 interface

show ipv6 route

Command	show ipv6 route [database]
parameter	database is router database
default	-
Mode	Admin and Configuration Mode
Usage Guide	show ipv6 route only shows IPv6 kernel routing table (routing table in tcip), database shows all routers except the local router.
Example	Display IPv6 Routing Table. Switch#show ipv6 route IPv6 Routing Table Codes: K - kernel route, C - connected, S - static, R - RIP, O - OSPF, I - IS-IS, B - BGP Timers: Uptime C ::1/128 via ::, Loopback, 02:55:37 tag:0

Display content	describe
IPv6 Routing Table	IPv6 routing table status
Codes: K - kernel route, C - connected, S - static, R - RIP, O - OSPF, I - IS-IS, B - BGP > - selected route	Abbreviation display sign of every entry

show ipv6 neighbors

Command	show ipv6 neighbors [{vlan ethernet} interface-number interface-name address <ipv6address>]													
parameter	{vlan ethernet} interface-number	specify the lookup based on interface												
	<i>ipv6address</i>	specifies the lookup based on IPv6 address. It displays the whole neighbor table entry if without parameter.												
default	-													
Mode	Admin and Configuration Mode													
Usage Guide	Displays neighbor table information. If there are no parameters, the entire neighbor table entry is displayed.													
Example	<p>Check ipv6 Neighbor Table Information.</p> <pre>Switch#show ipv6 neighbors IPv6 neighbour unicast items: 2, valid: 1, matched: 1, incomplete: 0, delayed: 0, manage items: 0 IPv6 Address Hardware Addr Interface Port State Age-time(sec) fe80::d8e4:a662:88e4:dc24 00-e0-4c-21-00-34 Vlan1 Ethernet1/0/18 reachable 563</pre> <p>IPv6 neighbour table: 1 entries</p> <table border="1"> <tr> <td>Display content</td><td>describe</td></tr> <tr> <td>IPv6 Address</td><td>Neighbor IPv6 address</td></tr> <tr> <td>Hardware Addr</td><td>Neighbor MAC address</td></tr> <tr> <td>Interface</td><td>Exit interface name</td></tr> <tr> <td>Port</td><td>Exit interface name</td></tr> <tr> <td>State</td><td>Neighbor status (reachable, stale, delay, probe, permanent, incomplete, unknown)</td></tr> </table>		Display content	describe	IPv6 Address	Neighbor IPv6 address	Hardware Addr	Neighbor MAC address	Interface	Exit interface name	Port	Exit interface name	State	Neighbor status (reachable, stale, delay, probe, permanent, incomplete, unknown)
Display content	describe													
IPv6 Address	Neighbor IPv6 address													
Hardware Addr	Neighbor MAC address													
Interface	Exit interface name													
Port	Exit interface name													
State	Neighbor status (reachable, stale, delay, probe, permanent, incomplete, unknown)													

show ipv6 traffic

Command	show ipv6 traffic
parameter	-
default	-
Mode	Admin and Configuration Mode
Usage Guide	Display IPv6 transmit packet statistics.
Example	<p>Display IPv6 transmit packet statistics.</p> <pre>Switch#show ipv6 traffic</pre>

IPv6 statistics:

Rcvd: 27 total, 21 local destination
0 header errors, 0 address errors
0 unknown protocol, 0 discards
Frags: 0 reassembled, 0 timeouts
0 fragment rcvd, 0 fragment dropped
0 fragmented, 0 couldn't fragment, 0 fragment sent
Sent: 24 generated, 0 forwarded
0 dropped, 0 no route

ICMPv6 statistics:

Rcvd: 21 total, 0 errors
0 unreachable, 0 too big, 0 time exceeded, 0 parameter problems
0 echo requests, 0 echo replies
0 group queries, 0 group responses, 0 group reduces
0 router solicits, 0 router advert, 0 redirects
9 neighbor solicits, 12 neighbor advert
Sent: 24 total, 0 errors
0 unreachable, 0 too big, 0 time exceeded, 0 parameter problems
0 echo requests, 0 echo replies
0 group queries, 0 group responses, 0 group reduces
0 router solicits, 0 router advert, 0 redirects
9 neighbor solicits, 9 neighbor advert

TCP statistics:

Rcvd: 0 total segments, 0 errors
Sent: 0 total segments, 0 retransmitted segments

UDP statics:

Rcvd: 0 total, 0 errors, 0 no port
Sent: 0 total

Display content	describe
IPv6 statistics:	IPv6 data report statistics
Rcvd: 27 total, 21 local destination 0 header errors, 0 address errors 0 unknown protocol, 0 discards	IPv6 received packets statistics
Frags: 0 reassembled, 0 timeouts 0 fragment rcvd, 0 fragment dropped 0 fragmented, 0 couldn't fragment, 0 fragment sent	IPv6 fragmenting statistics
Sent: 24 total, 0 errors 0 unreachable, 0 too big, 0 time exceeded, 0 parameter problems 0 echo requests, 0 echo replies 0 group queries, 0 group responses, 0 group reduces 0 router solicits, 0 router advert, 0 redirects	IPv6 sent packets statistics

adverts, 0 redirects 9 neighbor solicits, 9 neighbor adverts	
--	--

ip route

Command	ip route {<ip-prefix> <mask> <ip-prefix>/<prefix-length>} {<gateway-address> null0} [<distance>] no ip route {<ip-prefix> <mask> <ip-prefix>/<prefix-length>} [<gateway-address> <gateway-interface>] [<distance>]												
parameter	<table border="1"> <tr> <td><i>ip-prefix</i></td><td>Routing destination address, for example :1.1.1.1</td></tr> <tr> <td><i>mask</i></td><td>Routing destination address subnet mask, for example :255.255.255.0</td></tr> <tr> <td><i>prefix-length</i></td><td>Routing destination address prefix</td></tr> <tr> <td><i>gateway-address</i></td><td>Address IP next hop, for example :1.1.1.1</td></tr> <tr> <td><i>null0</i></td><td>Forwarding interface</td></tr> <tr> <td><i>distance</i></td><td>Routing priority, size range :1-255</td></tr> </table>	<i>ip-prefix</i>	Routing destination address, for example :1.1.1.1	<i>mask</i>	Routing destination address subnet mask, for example :255.255.255.0	<i>prefix-length</i>	Routing destination address prefix	<i>gateway-address</i>	Address IP next hop, for example :1.1.1.1	<i>null0</i>	Forwarding interface	<i>distance</i>	Routing priority, size range :1-255
<i>ip-prefix</i>	Routing destination address, for example :1.1.1.1												
<i>mask</i>	Routing destination address subnet mask, for example :255.255.255.0												
<i>prefix-length</i>	Routing destination address prefix												
<i>gateway-address</i>	Address IP next hop, for example :1.1.1.1												
<i>null0</i>	Forwarding interface												
<i>distance</i>	Routing priority, size range :1-255												
default													
Mode	Default static routing has a priority of 1 Global mode.												
Usage Guide	This command can be used to configure switch static routing. both the address and the forwarding interface are available by specifying the next hop IP the routing packet when configuring the next hop of the static route.												
Example	Add static routing to the switch. Switch(config)#ip route 192.168.2.8/24 null0												

3.Commands for ARP Configuration

arp

Command	arp <ip_address> <mac_address> {interface [ethernet] <portName>} no arp <ip_address>								
parameter	<table border="1"> <tr> <td><i>ip_address</i></td><td>is the IP address, at the same field with interface address</td></tr> <tr> <td><i>mac_address</i></td><td>is the MAC address</td></tr> <tr> <td><i>ethernet</i></td><td>stands for Ethernet port</td></tr> <tr> <td><i>portName</i></td><td>for the name of layer2 port</td></tr> </table>	<i>ip_address</i>	is the IP address, at the same field with interface address	<i>mac_address</i>	is the MAC address	<i>ethernet</i>	stands for Ethernet port	<i>portName</i>	for the name of layer2 port
<i>ip_address</i>	is the IP address, at the same field with interface address								
<i>mac_address</i>	is the MAC address								
<i>ethernet</i>	stands for Ethernet port								
<i>portName</i>	for the name of layer2 port								

default	No static ARP entry is set by default.
Mode	VLAN Interface Mode
Usage Guide	Static ARP entries can be configured in the switch.
Example	Configuring static ARP for interface VLAN1. Switch(Config-if-Vlan1)#arp 1.1.1.1 00-03-0f-f0-12-34 interface eth 1/0/2

clear arp-cache

Command	clear arp-cache
parameter	-
default	-
Mode	Admin Mode
Usage Guide	this command is used to clear the arp table.
Example	Clear the arp table. Switch#clear arp-cache

clear arp traffic

Command	clear arp traffic
parameter	-
default	-
Mode	Admin Mode
Usage Guide	Clear the switch ARP message statistics. box switches, this command only clears the statistics of APP messages received and sent from the current card.
Example	Clear switch ARP message statistics. Switch#clear arp traffic

show arp

Command	show arp [<ipaddress> [<vlan-id> [<hw-addr>] [type {static dynamic}] [count] [vrf word]
----------------	--

parameter	<i>ipaddress</i> is a specified IP address <i>vlan-id</i> Vlan id <i>hw-addr</i> for entry of specified MAC address <i>static</i> for static ARP entry <i>dynamic</i> for dynamic ARP entry <i>count</i> displays number of ARP entries <i>vrf word</i> is the specified vrf name																										
default	-																										
Mode	Admin Mode																										
Usage Guide	Displays the content of current ARP table such as IP address, MAC address, hardware type, interface name, etc.																										
Example	<p>Displays the current ARP table content information.</p> <pre>Switch#show arp ARP Unicast Items: 7, Valid: 7, Matched: 7, Verifying: 0, Incomplete: 0, Failed: 0, None: 0 Address Hardware Addr Interface Port Flag 50.1.1.6 00-0a-eb-51-51-38 Vlan50 Ethernet1/0/11 Dynamic 50.1.1.9 00-00-00-00-00-09 Vlan50 Ethernet1/0/1 Static 150.1.1.2 00-00-58-fc-48-9f Vlan150 Ethernet1/0/4 Dynamic</pre>																										
<table border="1"> <tr> <td>Display content</td> <td>describe</td> </tr> <tr> <td>Total arp items</td> <td>Total number of ARP entries.</td> </tr> <tr> <td>Valid</td> <td>ARP entry number matching the filter conditions and attributing the legality states.</td> </tr> <tr> <td>Matched</td> <td>ARP entry number matching the filter conditions.</td> </tr> <tr> <td>Verifying</td> <td>ARP entry number at verifying again validity for ARP</td> </tr> <tr> <td>InCompleted</td> <td>ARP entry number have ARP request sent without ARP reply.</td> </tr> <tr> <td>Failed</td> <td>ARP entry number at failed state.</td> </tr> <tr> <td>None</td> <td>ARP entry number at begin-found state.</td> </tr> <tr> <td>Address</td> <td>IP address of ARP entries.</td> </tr> <tr> <td>Hardware Address</td> <td>MAC address of ARP entries.</td> </tr> <tr> <td>Interface</td> <td>Layer 3 interface corresponding to the ARP entry.</td> </tr> <tr> <td>Port</td> <td>Physical (Layer2) port corresponding to the ARP entry.</td> </tr> <tr> <td>Flag</td> <td>Describes whether ARP entry is dynamic or static.</td> </tr> </table>		Display content	describe	Total arp items	Total number of ARP entries.	Valid	ARP entry number matching the filter conditions and attributing the legality states.	Matched	ARP entry number matching the filter conditions.	Verifying	ARP entry number at verifying again validity for ARP	InCompleted	ARP entry number have ARP request sent without ARP reply.	Failed	ARP entry number at failed state.	None	ARP entry number at begin-found state.	Address	IP address of ARP entries.	Hardware Address	MAC address of ARP entries.	Interface	Layer 3 interface corresponding to the ARP entry.	Port	Physical (Layer2) port corresponding to the ARP entry.	Flag	Describes whether ARP entry is dynamic or static.
Display content	describe																										
Total arp items	Total number of ARP entries.																										
Valid	ARP entry number matching the filter conditions and attributing the legality states.																										
Matched	ARP entry number matching the filter conditions.																										
Verifying	ARP entry number at verifying again validity for ARP																										
InCompleted	ARP entry number have ARP request sent without ARP reply.																										
Failed	ARP entry number at failed state.																										
None	ARP entry number at begin-found state.																										
Address	IP address of ARP entries.																										
Hardware Address	MAC address of ARP entries.																										
Interface	Layer 3 interface corresponding to the ARP entry.																										
Port	Physical (Layer2) port corresponding to the ARP entry.																										
Flag	Describes whether ARP entry is dynamic or static.																										

show arp traffic

Command	show arp traffic
parameter	-
default	-
Mode	Admin and Config Mode
Usage Guide	Display statistics information of received and sent APP messages.
Example	<p>Displays current ARP statistics.</p> <pre>Switch#show arp traffic</pre> <p>ARP statistics:</p> <pre>Rcvd: 0 request, 0 response Sent: 0 request, 0 response</pre>

4.Commands for ARP Scanning Prevention

anti-arpScan enable

Command	anti-arpScan enable no anti-arpScan enable
parameter	-
default	Disable ARP scanning prevention function.
Mode	Global configuration mode
Usage Guide	When remotely managing a switch with a method like telnet, users should set the uplink port as a Super Trust port before enabling anti-ARP-scan function, preventing the port from being shutdown because of receiving too many ARP messages. After the anti-ARP-scan function is disabled, this port will be reset to its default attribute, that is, Untrust port.
Example	<p>Enable the ARP scanning prevention function of the switch.</p> <pre>Switch(config)#anti-arpScan enable</pre>

anti-arpScan port-based threshold

Command	anti-arpScan port-based threshold <threshold-value> no anti-arpScan port-based threshold
----------------	---

parameter	<i>threshold-value</i>	rate threshold, ranging from 2 to 200.
default	10 packets /second.	
Mode	Global Configuration Mode	
Usage Guide	the threshold of port-based ARP scanning prevention should be larger than the threshold of IP-based ARP scanning prevention, or, the IP-based ARP scanning prevention will fail.	
Example	<p>Set the threshold of port-based ARP scanning prevention as 10 packets/second.</p> <pre>Switch(config)#anti-arpScan port-based threshold 10</pre>	

anti-arpScan ip-based threshold

Command	anti-arpScan ip-based threshold <threshold-value> no anti-arpScan ip-based threshold	
parameter	<i>threshold-value</i>	rate threshold, ranging from 1 to 200.
default	3 packets/second.	
Mode	Global configuration mode	
Usage Guide	The threshold of port-based ARP scanning prevention should be larger than the threshold of IP-based ARP scanning prevention, or, the IP-based ARP scanning prevention will fail.	
Example	<p>Set the threshold of IP-based ARP scanning prevention as 6 packets/second.</p> <pre>Switch(config)#anti-arpScan ip-based threshold 6</pre>	

anti-arpScan trust

Command	anti-arpScan trust [port supertrust-port] no anti-arpScan trust [port supertrust-port]	
parameter	-	
default	By default all the ports are non- trustful.	
Mode	Port configuration mode	
Usage Guide	If a port is configured as a trusted port, then the ARP scanning prevention function will not deal with this port, even if the rate of received ARP messages exceeds the set threshold, this port will not be closed, but the non- trustful IP of this port will still be checked. If a port is set as a super trusted port, then neither the port nor the IP of the port will be dealt with. If the	

port is already closed by ARP scanning prevention, it will be opened right after being set as a trusted port.

Example

Set port ethernet 4/5 of the switch as a trusted port.

```
Switch(Config-If-Ethernet4/5)# anti-arpScan trust port
```

anti-arpScan trust ip

Command

```
anti-arpScan trust ip <ip-address> [<netmask>]
```

```
no anti-arpScan trust ip <ip-address> [<netmask>]
```

parameter

<i>ip-address</i>	Configure trusted IP address
-------------------	------------------------------

<i>netmask</i>	Net mask of the IP.
----------------	---------------------

default

By default all the IP are non-trustful. Default mask is 255.255.255.255

Mode

Global configuration mode

Usage Guide

If a port is configured as a trusted port, then the ARP scanning prevention function will not deal with this port, even if the rate of received ARP messages exceeds the set threshold, this port will not be closed. If the port is already closed by ARP scanning prevention, its traffic will be recovered right immediately.

Example

Set 192.168.1.0/24 as trusted IP

```
Switch(config)#anti-arpScan trust ip 192.168.1.0 255.255.255.0
```

anti-arpScan recovery enable

Command

```
anti-arpScan recovery enable
```

```
no anti-arpScan recovery enable
```

parameter

-

default

Enable the automatic recovery function

Mode

Global configuration mode

Usage Guide

If the users want the normal state to be recovered after a while the port is closed or the IP is disabled, they can configure this function.

Example

Enable the automatic recovery function of the switch.

```
Switch(config)#anti-arpScan recovery enable
```

anti-arpScan recovery time

Command	anti-arpScan recovery time <seconds> no anti-arpScan recovery time	
parameter	<i>seconds</i>	Automatic recovery time, in second ranging from 5 to 86400.
default	300s	
Mode	Global configuration mode	
Usage Guide	this command is used to configure automatic recovery time, no command is used to restore default configuration.	
Example	Set the automatic recovery time as 3600 seconds. Switch(config)#anti-arpScan recovery time 3600	

anti-arpScan log enable

Command	anti-arpScan log enable no anti-arpScan log enable	
parameter	-	
default	Enable ARP scanning prevention log function.	
Mode	Global configuration mode	
Usage Guide	After enabling ARP scanning prevention log function, users can check the detailed information of ports being closed or automatically recovered by ARP scanning prevention or IP being disabled and recovered by ARP scanning prevention. The level of the log is “Warning”.	
Example	Enable ARP scanning prevention log function of the switch. Switch(config)#anti-arpScan log enable	

anti-arpScan trap enable

Command	anti-arpScan trap enable no anti-arpScan trap enable	
parameter	-	
default	Disable ARP scanning prevention SNMP Trap function.	

Mode	Global configuration mode
Usage Guide	After enabling ARP scanning prevention SNMP Trap function, users will receive Trap message whenever a port is closed or recovered by ARP scanning prevention, and whenever IP t is closed or recovered by ARP scanning prevention.
Example	Enable ARP scanning prevention SNMP Trap function of the switch. Switch(config)#anti-arpScan trap enable

show anti-arpScan

Command	show anti-arpScan [trust [ip port supertrust-port] prohibited [ip port]]
parameter	-
default	Display every port to tell whether it is a trusted port and whether it is closed. If the port is closed, then display how long it has been closed. Display all the trusted IP and disabled IP.
Mode	Admin Mode
Usage Guide	Use “show anti-arpScan trust port” if users only want to check trusted ports. The reset follow the same rule.
Example	<p>Check the operating state of ARP scanning prevention function after enabling it.</p> <pre>Switch#show anti-arpScan Total port: 28 Name Port-property beShut shutTime(seconds) Ethernet1/0/1 untrust N 0 Ethernet1/0/2 untrust N 0 Ethernet1/0/3 untrust N 0 Ethernet1/0/4 trust N 0 Ethernet1/0/5 trust N 0 Ethernet1/0/6 untrust N 0 Ethernet1/0/7 untrust N 0 Ethernet1/0/8 untrust N 0 Ethernet1/0/9 untrust N 0 Ethernet1/0/10 untrust N 0 Ethernet1/0/11 untrust N 0 Ethernet1/0/12 untrust N 0 Ethernet1/0/13 untrust N 0 Ethernet1/0/14 untrust N 0 Ethernet1/0/15 untrust N 0 Ethernet1/0/16 untrust N 0 Ethernet1/0/17 untrust N 0 Ethernet1/0/18 untrust N 0 Ethernet1/0/19 untrust N 0</pre>

Ethernet1/0/20	untrust	N	0
Ethernet1/0/21	untrust	N	0
Ethernet1/0/22	untrust	N	0
Ethernet1/0/23	untrust	N	0
Ethernet1/0/24	untrust	N	0
Ethernet1/0/25	untrust	N	0
Ethernet1/0/26	untrust	N	0
Ethernet1/0/27	untrust	N	0
Ethernet1/0/28	untrust	N	0

No prohibited IP.

Trust IP:

192.168.1.0 255.255.255.0

5.Commands for Preventing ARP Spoofing

ip arp-security updateprotect

Command	ip arp-security updateprotect no ip arp-security updateprotect
parameter	-
default	ARP table automatic update.
Mode	Global Mode/ Interface configuration.
Usage Guide	Forbid ARP table automatic update, the ARP packets conflicting with current ARP item (e.g. with same IP but different MAC or port) will be dropped, the others will be received to update aging timer or create a new item; so, the current ARP item keep unchanged and the new item can still be learned.
Example	Automatic update of ARP table is prohibited. Switch(Config-if-Vlan1)#ip arp-security updateprotect. Switch(config)#ip arp-security updateprotect

ip arp-security learnprotect

Command	ip arp-security learnprotect no ip arp-security learnprotect
parameter	-
default	ARP learning enabled.

Mode	Global Mode/ Interface Configuration
Usage Guide	This command is for preventing the automatic learning and updating of ARP. Unlike ip arp-security updateprotect, once this command implemented, there will still be timeout even if the switch keeps sending Request/Reply messages.
Example	Prohibit IPv4 version of the ARP learning function. Switch(config)# ip arp-security learnprotect

ip arp-security convert

Command	ip arp-security convert
parameter	-
default	-
Mode	Global Mode/ Interface configuration
Usage Guide	This command will convert the dynamic ARP entries to static ones, which, in combination with disabling automatic learning, can prevent ARP binding. Once implemented, this command will lose its effect.
Example	To change all dynamic ARP to static ARP. Switch(config)#ip arp -security convert

clear ip arp dynamic

Command	clear ip arp dynamic
parameter	-
default	-
Mode	Interface Configuration
Usage Guide	This command will clear dynamic entries before binding ARP. Once implemented, this command will lose its effect.
Example	Clear all dynamic ARP. on the interface. Switch(Config-if-Vlan1)#clear ip arp dynamic

clear ipv6 nd dynamic

Command	clear ipv6 nd dynamic
----------------	------------------------------

parameter	-
default	-
Mode	Vlan Interface Mode
Usage Guide	It used in dynamic table when use ND bind function to clear. After executeit, the command will be useless.
Example	Clear all dynamic ND. in ports. Switch(Config-if-Vlan1)#clear ipv6 nd dynamic

6.Command for ARP GUARD

arp-guard ip

Command	arp-guard ip <addr> no arp-guard ip <addr>
parameter	Addr is the protected IP address, in dotted decimal notation
default	There is no ARP GUARD address by default
Mode	Port configuration mode
Usage Guide	After configuring the ARP GUARD address, the ARP messages received from the ports configured ARP GUARD will be filtered. If the source IP addresses of the ARP message match the ARP GUARD address configured on this port, these messages will be judged as ARP cheating messages, which will be directly dropped instead of sending to the CPU of the switch or forwarding. 16 ARP GUARD addresses can be configured on each port.
Example	Configure the ARP GUARD address on port ethernet1/0/1 as 100.1.1.1 switch(config)#interface ethernet1/0/1 switch(Config-If-Ethernet 1/0/1)#arp-guard ip 100.1.1.1

7.Commands for Gratuitous ARP Configuration

ip gratuitous-arp

Command	ip gratuitous-arp [<interval-time>] no ip gratuitous-arp
----------------	---

parameter	<i>interval-time</i>	is the update interval for gratuitous ARP with its value limited between 5 and 1200 seconds and with default value as 300 seconds.
default		Gratuitous ARP is disabled by default.
Mode		Global configuration mode and vlan interface configuration mode
Usage Guide		When configuring gratuitous ARP in global configuration mode, all the Layer 3 interfaces in the switch will be enabled to send gratuitous ARP request. If gratuitous ARP is configured in interface configuration mode, then only the specified interface is able to send gratuitous ARP requests. When configuring the gratuitous ARP, the update interval configuration from interface configuration mode has higher preference than that from the global configuration mode.
Example		To enable gratuitous ARP in global configuration mode, and set the update interval to be 400 seconds. Switch#config Switch(config)#ip gratuitous-arp 400

show ip gratuitous-arp

Command	show ip gratuitous-arp [interface vlan <vlan-id>]	
parameter	<i>vlan-id</i>	VLAN ID
default	-	
Mode	All the Configuration Modes.	
Usage Guide	Displays gratuitous ARP configuration information.	
Example	Displays gratuitous ARP configuration information. Switch#show ip gratuitous-arp Gratuitous ARP send is Global enabled, Interval-Time is 300(s) Gratuitous ARP send enabled interface vlan information: Name Interval-Time(seconds) Vlan1 400 Vlan10 350	

8.Commands for Dynamic ARP Inspection

ip arp inspection

Command	ip arp inspection vlan <vlan-id> no ip arp inspection vlan <vlan-id>
parameter	vlan-id is the vlan which is enabled the dynamic ARP inspection function
default	Disable.
Mode	Global Mode.
Usage Guide	After configured the dynamic ARP inspection function in global mode, the administrator can intercept, record and drop the ARP data packets which have the invalid MAC address/IP address.
Example	Enable the dynamic ARP inspection function of vlan10. Switch(config)# Switch(config)#ip arp inspection vlan 10 Switch(config)#exit

ip arp inspection trust

Command	ip arp inspection trust no ip arp inspection trust
parameter	-
default	All the ports are the untrusted ports as default.
Mode	Port Mode
Usage Guide	After configured this command under the port mode, the configured port will not inspect the received ARP packet and it will forward it directly. If the ARP data packet is received from the untrusted port, the switch will only forward the lawful data packet. For the illegal data, it will drop the data directly and record this action.
Example	Configure the port 1/0/1 as the trusted port. Switch(config)# Switch(config)#in e 1/0/1 Switch(config-if-ethernet1/0/1)#ip arp inspection trust

ip arp inspection limit-rate

Command	ip arp inspection limit-rate <rate> no ip arp inspection limit-rate
----------------	--

parameter	rate	is the configured limited rate of the ARP packet of the untrusted port, the unit is pps
default		Do not limit the rate for the ARP packets of the trusted or untrusted ports.
Mode		Port Mode
Usage Guide		This command can limit the ARP packet rate of the untrusted port. The rate of the lawful ARP data packets forwarding is in the limited range.
Example		<p>Configure the rate of the ARP packet of the untrusted port 1/0/1 as 100pps.</p> <pre>Switch(config)# Switch(config)#in e 1/0/1 Switch(config-if-ethernet1/0/1)# ip arp inspection limit-rate 100 Switch(config-if-ethernet1/0/1)#exit</pre>
